DATA LAKES IN USE

Data comes from many types of sources. In fact, businesses rarely come to a data-driven decision with just one source. Instead, it takes numerous inputs, and much of that can be unstructured.

Data Lakes place these all in a single repository, saving **time, effort, and cost**

5

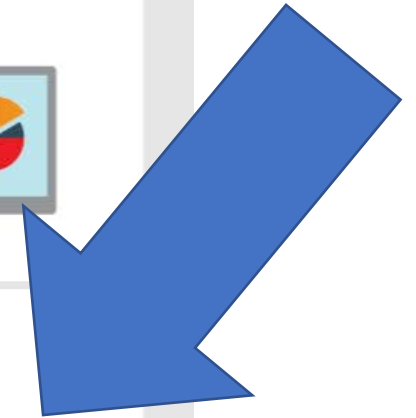

Average number of data sources consulted to reach a data-driven decision

80%

Amount of data that is unstructured and incapable of being handled by a data warehouse
